

# HTML Layouts

## Using Div:

```
<!DOCTYPE html>
<html>
<body>

<div id="container" style="width:500px">

<div id="header" style="background-color:navy;">
<h1 style="margin-bottom:0; color:white;">Title of Web Page</h1></div>

<div id="menu" style="background-color:#FFD700;height:200px;width:100px;float:left;">
<b>Menu</b><br>
Item 1<br>
Item 2<br>
Item 3</div>

<div id="content" style="background-color:#EEEEEE;height:200px;width:400px;float:left; text-align:center;">
Content goes here</div>

<div id="footer" style="background-color:#FFA500;clear:both;text-align:center;">
Copyright © ELTP 4 Batch</div>

</div>

</body>
</html>
```

# HTML Layouts

## Using table:

```
<!DOCTYPE html>
<html>
<body>

<table width="500" border="0">
<tr>
<td colspan="2" style="background-color:navy;">
<h1 style="margin-bottom:0; color:white;">Title of Web Page</h1>
</td>
</tr>

<tr>
<td style="background-color:#FFD700;width:100px;text-align:top;">
<b>Menu</b><br>
Item 1<br>
Item 2<br>
Item 3</td>
<td style="background-color:#EEEEEE;height:200px;width:400px;text-align:center;">
Content goes here</td>
</tr>

<tr>
<td colspan="2" style="background-color:#FFA500;text-align:center;">
Copyright © ELTP 4 Batch</td>
</tr>
</table>

</body>
</html>
```

**Note:** The biggest advantage of using CSS is that, if you place the CSS code in an external style sheet, your site becomes MUCH EASIER to maintain.
